

Generic Unit Year 13

Teaching Sequence	Learning Intentions	Criteria for Evaluation	Assessment Strategy
<p>Introduction to Year 13 and expectations</p> <ul style="list-style-type: none"> ▪ NCEA overview including opportunities for scholarship and how Year 13 steps up from Year 12. ▪ Presentation of evidence-expectations ▪ Year 13 technology-pathways ▪ Technology cycle and the use of clients ▪ Assessment policies/procedures/formative/summative ▪ Timelines-unit overview/programme/deadlines. 	<p><i>Students understand:</i></p> <ul style="list-style-type: none"> ▪ How achievement/unit standards (<i>teacher to insert</i>) will be used to assess them in technology, importance of timelines and deadlines, assessment procedures and expectations of homework and extra work out of class. ▪ How scholarship works. 	<p><i>Students meet deadlines over the course duration.</i></p> <p><i>Consequences of not meeting deadlines.</i></p>	<p>Ongoing teacher/student interaction-feedback</p>
<ul style="list-style-type: none"> ▪ Establishing Clients and issues related to client relationships ▪ Anticipation of costs/budgets ▪ Teacher communicates with clients 	<p><i>Students understand:</i></p> <p>The importance of establishing genuine clients and the need to be able to communicate with them regularly.</p>	<p><i>Students identify a client</i></p>	
<p>Introduction to possible context(s) and client issues associated with the contexts</p> <ul style="list-style-type: none"> ▪ Class brainstorms possible issues ▪ Individual students identify a possible client and eventually an issue. ▪ Exploration of issue and the location in which the issue resides ▪ Identify possible key and wider community stakeholders ▪ Teacher confirms suitability of client 	<p><i>Students can:</i></p> <ul style="list-style-type: none"> ▪ Identify client issue ▪ Identify those who have an interest in the issue ▪ research the main implications of the environment/location ▪ how the stakeholders and environment will influence a developing solution 	<p><i>Students research and identify the problem to be resolved.</i></p> <p><i>Students ensure that selected issue is rigorous enough to allow students to provide evidence for the selected achievement standards</i></p> <p><i>Key and wider stakeholders have an interest in the issue and are prepared to give constructive feedback.</i></p>	<p>Student explains choice of client and potential issue to the teacher</p>
<p><i>Skill development: Project Management</i></p> <ul style="list-style-type: none"> ▪ Reflect on past planning practices and evaluate for usefulness ▪ Develop project management strategies. 	<p><i>Students understand that:</i></p> <ul style="list-style-type: none"> ▪ Planning is an important aspect of managing a project and is a dynamic process. ▪ There are consequences when planned stages are not met on time. 	<p><i>Students:</i></p> <ul style="list-style-type: none"> ▪ <i>Identify milestone stages and develop timelines – incorporates all milestones to meet given deadline</i> ▪ <i>Student planning clearly communicates next steps and why.</i> 	<p>Gantt chart or other selected project management tools</p>

<p><i>Practising Technologists</i> (either two technologists or two outcomes from one technologists)</p> <ul style="list-style-type: none"> ▪ Preparation for industry visits. ▪ Industry visits and or speakers and/or case studies. <p>Document key steps in practice and the knowledge that underpins the practice and why.</p>	<p><i>Students can:</i></p> <ul style="list-style-type: none"> ▪ Students interact with technologist. ▪ Recognise/analyse key steps in technologist practice 	<p><i>Students:</i></p> <ul style="list-style-type: none"> ▪ <i>Develop questions</i> ▪ <i>Record answers</i> <p><i>Analyze/Synthesize information. (inclusion/exclusion into students own practice)</i></p>	<p>Student submits report and any visual evidence. AS 90686</p>
<ul style="list-style-type: none"> ▪ Start to identify initial key factors (all important considerations that are identified as a result of research to date) in order to establish a need(s). ▪ Conceptual statement 	<p><i>Students can</i> develop an conceptual statement that reflects client and wider stakeholder(s) needs/desires and location constraints</p>	<p><i>Students initial brief</i></p> <ul style="list-style-type: none"> ▪ <i>addresses stakeholder needs/desires/ constraints/legislation and location needs.</i> 	<p>Initial Brief</p>
<p><i>Knowledge and skill development</i></p> <ul style="list-style-type: none"> ▪ Discuss means of researching and communicating conceptual ideas: e.g internet search, magazines, existing solutions, drawings, quick models, notes. ▪ Sourcing relevant information ▪ Students conduct own research and produces concepts for discussion with client and stakeholders. ▪ Refine brief and specifications 	<p><i>Students can:</i></p> <ul style="list-style-type: none"> ▪ Select means of researching and recording ideas and justifies decision. ▪ Communicate idea to client/stakeholders. ▪ Reflect on findings to refine brief and establish some specifications 	<ul style="list-style-type: none"> ▪ <i>Students' conceptual ideas are informed by research.</i> ▪ <i>Conceptual ideas are presented to the client/stakeholder in a way that clearly communicates the idea.</i> ▪ <i>Interactions are recorded and key decisions justified.</i> ▪ <i>Findings from own practice and stakeholder are reflected in the developing brief.</i> 	<p>Student/teacher conferencing.</p>
<p><i>Knowledge and Skill Development</i></p> <ul style="list-style-type: none"> ▪ Students are introduced to a range of knowledge and skills which are context specific at this level. 	<p>Students develop a 'bank' of appropriate skills for the material(s) they are likely to use</p>	<p><i>Students:</i> <i>Trial and record a range of techniques.</i></p>	<p>Teacher discusses results with student.</p>
<p><i>Knowledge development</i> Codes of Practices and ethical considerations for product development. This includes: material marking out, cutting and joining methods; modelling methods; properties of commonly used materials including their limitations and possibilities; use of tools and machinery when manufacturing products.:-</p>	<ul style="list-style-type: none"> ▪ Students know the relevant codes of practice for product development ▪ Recognise the codes of practice used by practicing technologists 	<p><i>Students:</i> <i>Understand the codes of practice That are important to their own practice.</i></p>	<p>Relevant codes of practice have been considered.</p>

<p><i>Skill Development:</i> Demonstrate how modelling techniques are used to test ideas.</p> <ul style="list-style-type: none"> ▪ Concept development including: ▪ ongoing planning and brief refinement, ▪ knowledge development and materials properties and uses. ▪ Sketching to communicate ideas ▪ The importance of regular communication with client and wider stakeholders. 	<p>Students can:</p> <ul style="list-style-type: none"> ▪ Test and trial key ideas for inclusion/exclusion ▪ Plan for each step including resources ▪ Develop brief as decisions are made ▪ Justify key decisions as in material choice ▪ Seek appropriate feedback from client/stakeholders 	<p><i>Students:</i> <i>record key steps in developing their prototype in order to communicate with stakeholders and gain feedback</i></p>	<p>Model, Photographs and or sketches show development process and the developing brief reflects the key decisions made</p>
<ul style="list-style-type: none"> ▪ Gives examples of finalised/ prioritised key factors ▪ Provides opportunity for ongoing refinement of brief and development of conceptual design into a final design informed by planning. ▪ Production of working drawings. ▪ Final Brief and Specifications 	<p><i>Students can:</i> Prioritise and Justify key factors Use planning to inform the development of their final design</p>	<p><i>Students use:</i> <i>On going project management to inform design development</i> <i>Working drawing is a true representation of product to be manufactured.</i></p>	<p>Planning documentation Working drawing checked for accuracy</p>
<ul style="list-style-type: none"> ▪ Model of Concept or One Off solution-assembly. 	<p><i>Students can:</i> Assemble and tests to demonstrate their design features potential or actual fitness for purpose (to client and wider stakeholders.)</p>	<p><i>Students demonstrate potential and fitness for purpose.</i></p>	<p>submits Conceptual Design or One Off solution and written justifications</p>
<ul style="list-style-type: none"> ▪ Confirmed Final Brief and Specifications 			<p>Final Brief and Specification</p>
<ul style="list-style-type: none"> • Conceptual Design or One off solution Evaluation (in situ) with client and in intended location. • Discuss ‘future viability’ of the conceptual design or the one off solution 	<p>Students can demonstrate that their outcome is fit for purpose with its intended location</p>	<p><i>AS 90613, 90620, 90686, 90687</i> <i>See assessment schedule</i> <i>Students can develop an outcome and the final evaluation shows that it is fit for purpose.</i></p>	<p>Test evidence and evaluation of outcome being used in situ, including client feedback.</p>
