Technological Practice Glossary

Technology: A purposeful outcome that has been designed to meet a need or opportunity, and has an impact on how we live.

Brief: Describes a desired outcome that meets a need or opportunity.

Conceptual Statement: States what is to be created, why it is being created and how it will happen.

Attributes: Describe what an item looks like and the purpose for what it is used.

Functional Modelling: is about trialling design concepts.

Fitness for Purpose: Judges the ability of the intended outcome to carry out the job for which it is intended.

Conceptual Design: Where design ideas are collated to show the intended outcome and its details.

Stakeholders: Anyone who has an interest in the final technological outcome.

Resources: The tools and materials used to create the technological outcome.
