CONSTRUCTION AND MECHANICAL TECHNOLOGIES: KNOWLEDGE OF RESISTANT MATERIALS CONSTRUCTION

Resistant Materials refer to a group of materials that are grouped together because they show certain common characteristics. These characteristics include: tensile strength, compressive resistance, hardness, malleability, ductility, elasticity, grain. Such materials are broadly categorised as wood, metal, ceramics, plastics, glass and their composites. Particular resistant materials exhibit characteristics to a greater or lesser extent. Resistant materials are often sub categorised. For example hardwood and softwood; thermosetting and thermoplastics, alloys and pure metals.

Resistant materials require particular basic techniques to be used to enable materials to be measured, cut, shaped, joined and finished when making products. Advanced and complex techniques are required to craft special features of a high standard in a product and rely on the consistent application of accepted conventions to achieve a desired effect. Special features can be structural and/or aesthetic and include such things as: inlays, special fit (eg, interference, push fit), matching turned components, internal screw cutting on a lathe, compound machining, glass fusing.

Knowledge within this component includes understanding how resistant materials are characterised, and understanding techniques used to work them. Understanding of techniques would include: how it is done in a safe and effective manner, the impact of the technique on materials involved, and when the technique would be suitable to use.

Initially students learn about resistant materials per se, the basic techniques commonly used to work them, and the relationship between these. Students progress to learning about advanced techniques and conventions required for highly crafted special features and the complex concepts and processes involved in resistant materials evaluation and development.

<tr>
<td></td>
<td>To support students to develop understandings about the basic techniques used to make resistant material products at level 6, teachers could:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Provide opportunity for students to categorise a range of materials and identify those that display characteristics associated with the broad categories: resistant materials and textiles. Include materials that exist at the boundaries of the category such as vinyl and leather.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Provide opportunity for students to explore a range of products made from resistant materials in order to discuss the materials used, their characteristics and the techniques that would be appropriate to work them safely.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Guide students to explore how and why resistant materials and techniques are combined differently for particular situations.</td>
<td></td>
</tr>

</tbody>
</table>

**Indicators:**

- Students can:
  - explain how the characteristics of resistant materials influence the selection of safe techniques
  - discuss why resistant materials require particular techniques for their safe handling and use
  - discuss why techniques and resistant materials are combined in different ways across two or more situations.

**AS**

AS91059 Construction and Mechanical Technologies 1.22

Demonstrate understanding of basic concepts used to make products from resistant materials

AS91347 Construction and Mechanical Technologies 2.22

Demonstrate understanding of advanced concepts used to make products

**Level 1 Construction & Mechanical standards**

**Level 2 Construction & Mechanical standards**

**Level 3 Technology achievement standards & assessment resources DRAFT**

**Learning Objective could progress to:**

Implement complex procedures to make a specified product using a Computer Numerical Controlled (CNC) machine
